

Ontario Science Centre
Architectural Hydraulophone Centrepiece

This hydraulophone installation was selected out of over 200 project proposals to be the architectural centrepiece at the Ontario Science Centre.

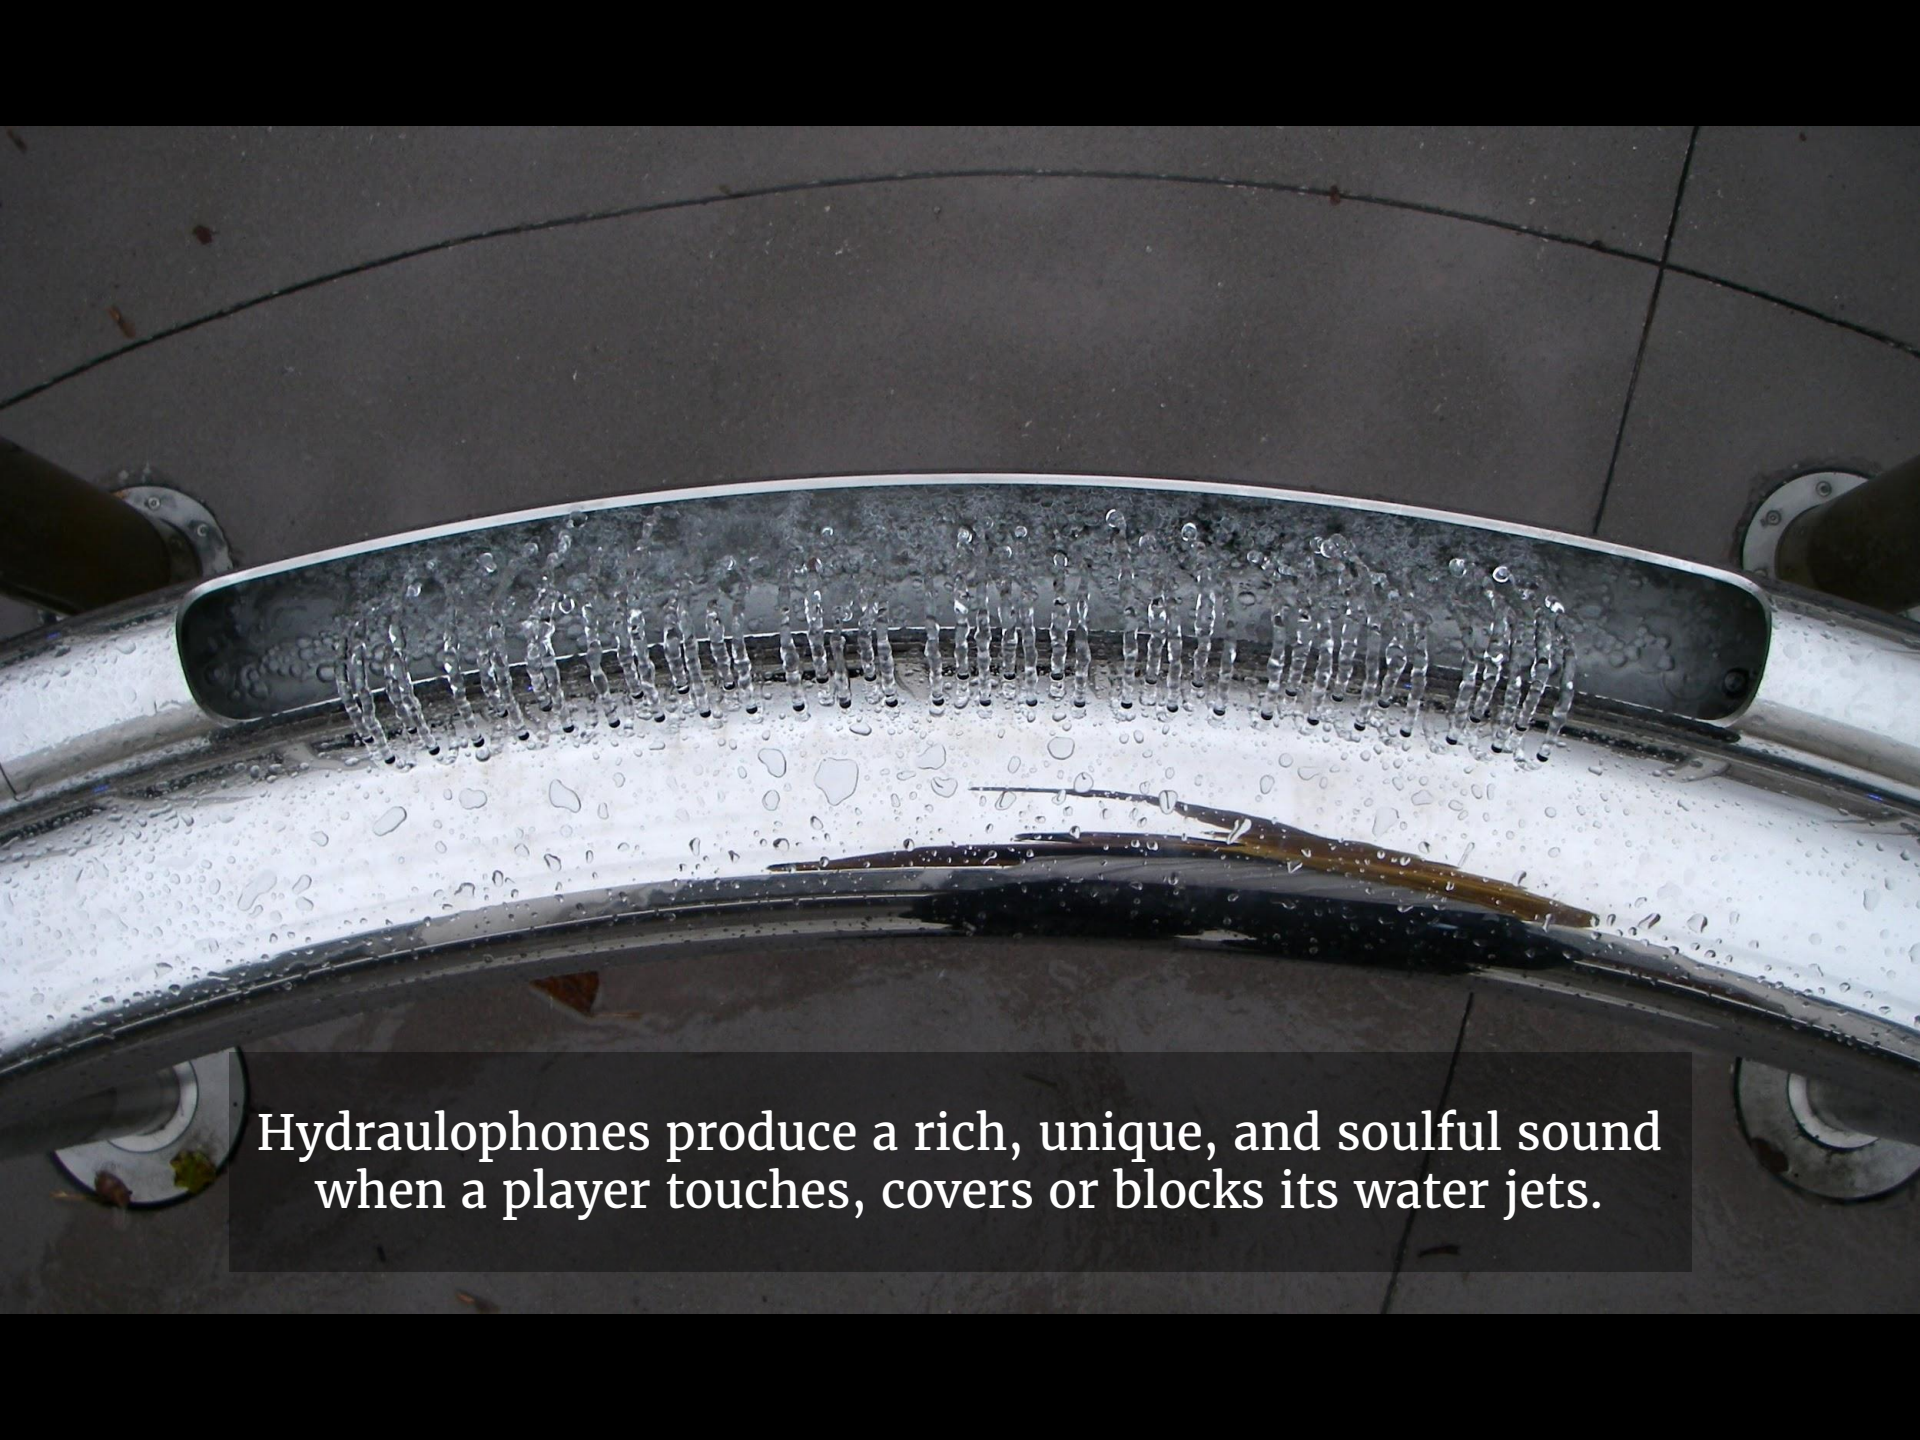

It is accessible to the public 24/7 and serves both as a landmark installation and as an interactive water feature.

Aerial View

The instrument has separate panels for two or more people to make music together.

Hydraulophones produce a rich, unique, and soulful sound when a player touches, covers or blocks its water jets.
